

ICS3U Homework: Gathering Java Resources

Purpose:

In this homework, you will search for web sites that are your Java support sites throughout the semester. Luckily, Java is a language with many tutorials & example code available on the Internet. Utilize these sites productively to help you problem solve rather than to give you answers.

Task:

Search the Internet for information on different Java topics listed below. The number in the bracket specifies the minimal number of web sites / pages you need to find for the topic. For each of the findings, include its URL and a brief comment to indicate its usefulness for your future use. Organize your findings in a well-formatted word document, using a table.

- Java IDE (2 excluding JGrasp)
- Java tutorial for beginners (2)
- Java syntax (1)
- Java lesson on standard input / output (2)
- Java lesson on variables, data types (2)
- Java lesson on selections (if & case structure) (2)
- Java lesson on repetitions (2)
- Java lesson on file input / output (2)
- Java lesson on arrays (2)
- Java 8 API Specification (1)
- Java GUI (1)

Example Table Entry

Topic	URL	Comments

Internet Favourites List:

Go home and add these sites to your favourites list / bookmark on the browser.
